Editor Support for Red Sea Markup Language

RSML is currently supported in 3 code editors, out of which 1 is an IDE.

Visual Studio

NOTE

This extension is currently in preview. Some features might not be working exactly as intended, and some features might be missing. Please report any bugs you find to [this repository](#): it would help us immensely.

RSML support in Visual Studio is achieved by installing the [RSML extension](#) for Visual Studio.

Latest supported RSML specification:

- v2.1.0 (unreleased)

Recognized file types:

- `.rsea`
- `.decision`
- `.rsml`

Features:

- Syntax highlighting

Planned features:

- Evaluate RSML from within Visual Studio (*current host, default common hosts and custom host*)
- “Lightbulb” actions (*IntelliSense suggestions*)
- Visual editor for RSML (*designer*)

Visual Studio Code

RSML support in Visual Studio Code is achieved by installing the [RSML extension](#) for Visual Studio Code.

Latest supported RSML specification:

- v2.1.0 (unreleased)

Recognized file types:

- `.rsea`
- `.decision`

Features:

- Syntax highlighting

Notepad++

RSML support in Notepad++ is achieved by using the custom User Defined Language available [here](#).

Latest supported RSML specification:

- v2.1.0 (unreleased)

Recognized file types:

- `.rsea`
- `.decision`
- `.rsml`

Features:

- Syntax highlighting

JetBrains IDEs

Currently unsupported, but official extensions are planned.

Zed

Currently unsupported, but official extensions are planned.

Emacs

Currently unsupported. No plans to support in the near future.

Vim and Neovim

Currently unsupported. No plans to support in the near future.
